Self-assessment — Rohan Kulkarni

Half-year: April to September 2026 · Grade C3 · Data Engineer

What went well

I completed the customer churn dashboard and delivered all three sprint commitments in September.

My strength is problem solving, and I am good at debugging complex data pipeline issues.

I reduced the nightly load time of the orders pipeline from three hours to fifty minutes.

What did not go well

I struggled with estimation in the first two sprints and missed two deadlines.

I need to improve my communication when I am blocked, instead of waiting for the stand-up.

With the support of my improvement plan, I now share a written status update every Friday.

Learning and next steps

I want to attend the advanced SQL performance training and the Agile estimation workshop.

My goal for the next half is to deliver every sprint commitment on time.

I would also like to lead one module end to end by the end of the next quarter.

I would like more regular feedback from my manager on how I am doing against the plan.
